**Server-side Web Development**

# Unit 02. PHP basics.

Practice 03

**IES Jaume II El Just**
Tavernes de la Valldigna
Departament d'Informàtica
Curs 2023-24

# 1 PRACTICE 03

## 1.1 Exercise 01

Write a PHP script to display on the screen, in "dd-mm-yyyy" format, the date of yesterday, today and tomorrow.

```
1  Yesterday was 24-09-2023, today is 25-09-2023, and tomorrow will be
     26-09-2023
```

## 1.2 Exercise 02

**Last element of an array**

We have an array which content we don't know. Display on the screen the element in the last position of the array.

```
1  $array1=(1,5,8,10);
2  // we would show "10"
3  $array2=("Pepe","Juan","Lola","Luisa","Ana","Jaime");
4  // we would show "Jaime"
```

## 1.3 Exercise 03

**Extracting information from a date**

We have a string containing a date in the format "dd/mm/YYYY". Show on the screen the day, the month and the year, every one in a separate line, **without using date functions**.

```
1  $stringDate="10/11/2022";
2  // we would display
3  // Day: 10
4  // Month: 11
5  // Year: 2022
```
